

Synapse WMS

A warehouse management system built to help 3PLs grow

Synapse WMS is designed specifically for the unique demands and complexities facing modern 3PLs. It offers a scalable, configurable platform suitable for both smaller, growing operations and multi-site enterprises supporting hundreds of customers.

All modules are included from the jump, with robust feature sets and regular releases to provide a true enterprise solution without costly, cumbersome one-off customizations. Synapse WMS equips 3PL operations with the flexibility to adjust on a dime, with setting up and adjusting processes as easy as answering a questionnaire, and detailed configurability down to the item level.

With Synapse WMS, 3PLs can better serve customers and improve operational performance:

- **Billing** – Automate billing for labor, storage, value-added service and other unique requirements, customized for each customer
- **Order fulfillment** – Optimize e-commerce picking processes, including workflows, packaging options and value-added services
- **Labor management** – Improve labor forecasting and increase throughput through sophisticated reporting and data mining
- **Inventory management** – Keep up to date on inventory status with customization options to meet the needs of multiple customers
- **Kitting and assembly** – Stay on top of inventory tracking with kitting functionality that makes it easy to pinpoint individual items bundled in order packages
- **System integration** – Easily integrate with other internal systems like shopping cart programs, parcel manifesting, automated equipment and more
- **Reporting** – Share critical data like order status through different levels of the supply chain with secure, easy API integration

**Get the most out of your 3PL warehouse operation.
